

CELESTRON VIDEO CAMERA ACTIVATION

1. Remove the lens cap from the 8" Celestron telescope mounted on the top of the main telescope mirror box. This is best accomplished by standing on the RA gear enclosure box before the 24" telescope is unparked.

2. Power to the video camera is applied as soon as the IP9258 power bar is activated and the Mallincam button is selected.
3. Turn on the small dome monitor located beside the dome computer monitor.
4. It may be necessary to adjust the small monitor brightness and contrast controls once you acquire an image. The dimmest objects viewable are ~ mag 7 - 8.
